

10 THINGS TO CONSIDER BEFORE BUYING A CASE

When purchasing protective cases for your edtech investment, there are many questions to consider to ensure you are getting the best product to meet your needs. Gumdrop is here to help guide you through the process, and ultimately help keep your devices safe. Here are the top 10 things to think about when purchasing cases for student devices:

- 1** Is the case drop-tested?
What standards are they tested against?

- 2** Does the case have a 2-part design that slides on for easy deployment?

- 3** Does the case offer eight (8) corners of protection?

- 4** What materials are used to make the case? Are they going to withstand drops and damage?

- 5** Will the screen or the keyboard take the brunt of the impact during a fall?

- 6** What warranty terms is the company offering with the purchase?

- 7** Does the case aid in the asset tagging process? Do you have to remove the case to scan the device?

- 8** Does the case style make sense for the age of your users?

- 9** Are your school district's devices kept at school or are they taken home each day?

- 10** Have you ordered samples and gathered feedback from the primary device user?
